Prompt for Replit AI:

I want to build a lean MVP web app for the Ghanaian auto parts market. Please create the following:

Core Pages & Features

1. **Home Page**

   - Simple search bar where buyers enter **car model** + **part name**.

   - Search button leads to **All Parts page** with filtered results.

2. **All Parts Page**

   - Displays listings in grid or list view.

   - Each listing card should include:

     - **Part photo** (thumbnail).

     - **Part name**.

     - **Car model compatibility**.

     - **Condition**: New or Used.

     - **Price** (optional).

     - **Seller type**: Private or Business.

     - **Location**: area + city (e.g., Lapaz, Accra / Adum, Kumasi).

   - Clicking a listing opens the seller profile.

3. **Seller Profile Page**

   - Shows seller name or business name, seller type (private/business), and location (area + city).

   - Displays all parts listed by that seller with:

- Part photos (multiple images if possible).

- Name, model compatibility, condition, price.

○ Includes contact options:

- Call (tel:)

- WhatsApp (wa.me link)

- In-app chat (basic text chat if feasible).

○ Buyers can leave a simple rating (1–5 stars).

4. **Seller Portal (basic)**

○ Sellers can create an account, log in, and:

- Add new part listings with:

- Name

- Car model compatibility

- Condition (New/Used)

- Price

- Location (area + city)

- Photos (upload 1–3 images)

- Edit or delete their listings.

○ Support both **Private sellers** and **Business sellers**.

5. **Admin Panel (basic)**

○ Admin can log in and:

- Verify sellers (toggle a verified badge on their profile).

- Remove sellers or listings if necessary.

User Flow (MVP)

1. Buyer opens app → enters car model & part name.

2. System shows matching listings on **All Parts page**.

3. Buyer clicks a listing → opens seller profile with photos + details.

4. Buyer clicks **Contact Seller** → options: call/WhatsApp/chat.

5. Buyer may leave a rating on seller profile.

6. Sellers can add/manage listings through Seller Portal (with photos + condition).

7. Admin can verify/manage sellers and listings.

Success Criteria

1. Buyers can find at least one matching listing when searching.

2. Sellers (private or business) can list and update parts easily with photos and condition info.

3. Admin can verify and manage sellers.

Design / Branding Notes

- Use **"QuickParts"** branding.

- Keep design **clean, lightweight, mobile-first**.

- Listings must always show **part photos** and **condition**.

- Locations should be displayed as **area + city (e.g., Lapaz, Accra / Adum, Kumasi)**.

- Avoid displaying exact street addresses for safety.
